Personal Tutor Assistant

Project Pitch

Smayan, Jake, MJ, Gary, Shihan, [Name]

Our Project Idea

What the brief says the system should do

- Students
  - Add notes to each meeting
- Personal Tutors (PTs)
  - Schedule meetings
  - Report on attendance
  - Raise any issues
  - Keep track of all meetings
- Student Officers
  - See all student attendance
  - Raise concerns about low attendance
  - Notify students

Publicly available information

- UoP Personal Tutoring policy (2025)
- UoP Student Engagement and Attendance policy (2025)

Has this been done before?

- Commercial platforms, e.g. SEAtS ONE, offer personal tutor and attendance tools
- Without a dedicated tool, PTs rely on email, calendars and spreadsheets

How our solution is different

- One place for scheduling, attendance, notes and concerns
- Automatic low-attendance flags using limits set by Student Officers
- No license cost, unlike commercial platforms

What We Need to Keep in Mind

- **Attendance data:** where does it come from?
  - PT marks attendance after each meeting
  - Students check in with a one-time code during the meeting
- **Low attendance:** what counts as "low"?
  - Student Officers set the limit (e.g. below 60%, or 2 missed in a row)
- **Notifications:** how are students told?
  - In-app alerts and email, with the PT copied in
- **Privacy:** who can see meeting notes?
  - Role-based access; notes stay between the student and their PT
- **Admin role:** who assigns students to PTs?
- **Cancellations:** does a cancelled or rescheduled meeting count as missed?

We'll confirm these through interviews with PTs and a student survey

Complexity: UI, Logic & Storage

UI level

- HTML, CSS, JavaScript
- Separate dashboards for students, PTs and Student Officers
- Calendar view for scheduling meetings
- Attendance overview and alerts

Logic level

- Python (Flask)
- Scheduling and clash checking
- Attendance percentage calculations
- Low-attendance flags and notifications
- Role-based access (who can see what)

Storage level

- SQL database (SQLite / PostgreSQL)
- Users and roles
- PT–student links
- Meetings and attendance records
- Notes and concerns

Our Team & How We'll Work

Our team

- **Strengths:** we all know Python, JavaScript and HTML/CSS, so anyone can pick up or review any part of the code
- **Weaknesses:** little experience with Flask, SQL databases and automated testing
- Experience and languages
  - **Smayan:** Python, JavaScript, HTML/CSS
  - **Jake:** Python, JavaScript, HTML
  - **MJ:** Python, JavaScript, HTML/CSS
  - **Gary:** [languages]
  - **Shihan:** Python, TypeScript, JavaScript, HTML/CSS. Worked with framework like react, node js, Django.
  - **[Name]:** [languages]
- **Willing to learn:** Flask, SQL, automated testing
- **First team leader:** Gary; the role rotates so everyone leads once

Teamwork

- **Communication:** Discord server, with members tagged for their tasks
- **Meetings:** weekly recurring Google Calendar invite, on campus or on Zoom
- **Records:** every meeting has an agenda; minutes and attendance go in a shared Google Drive folder
- **Tasks:** assigned in meetings and tracked on a GitHub Projects board
- **Disagreements:** discussed in meetings and settled by vote; module coordinator if unresolved
- **Code conflicts:** avoided with branches and reviewed pull requests; we'll practise merge conflicts on a test repo
